Your Custom Aluminum Window and Door Manufacturer

Saint Cloud designs and manufactures custom aluminum windows and doors for commercial buildings of distinction, where aesthetics and performance are critical elements of design.

The Luxury of Quiet™

We live in a noisy world with traffic, machinery, electronics and more. Noise pollution is rampant.

The good news is we have the solutions to keep the noise in its place.

Products manufactured by Saint Cloud are specifically designed and engineered to block sound from the busy outside world, delivering peaceful, calm interior spaces, providing the luxury of quiet.

All of our products are engineered and laboratory-certified for acoustic performance so you can be prepared for any condition, function or application.

When your design calls for quiet, our experts are happy to help you specify and detail the design components necessary to meet the most demanding sound attenuation requirements.

Acoustic Products

At Saint Cloud, we are equipped with an extensive repository of product test and transmission loss data, along with many years of practical experience, to help you achieve the interior sound criteria your project demands.

Windows

We have been perfecting the design and function of superior-performing acoustic windows for more than 25 years. From that experience, we produce products with Sound Transmission Class (STC) ratings as high as 60 and Outdoor Indoor Transmission Class (OITC) ratings up to 49. Designed to perform for the long term, they incorporate precise profiles, superb operating hardware and the best finishes available to the architectural product marketplace.

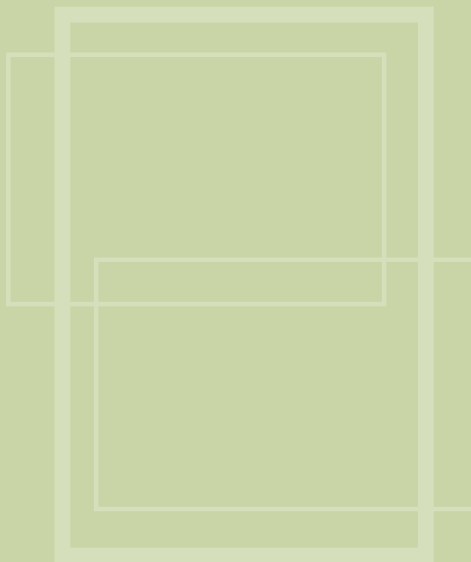

Terrace, French and Sliding Glass Doors

Our doors are held to the same precise standards as our windows. Their elegance and style are equally complementary to contemporary living spaces or accurate historic renovations. Our acoustically rated doors provide exceptional performance to portals that other manufacturers simply cannot achieve.

Curtain Wall

Our acoustic curtain wall systems are designed for larger fenestrations with greater spans. More than just a “bolt-on” adaptor to standard curtain walls, this system is designed expressly to provide both superior sound attenuation and exceptional thermal performance. Features include integral stacking mullions systems, custom color and dual finishes, myriad glazing options and distinctive aesthetics to complement the unique design of your project.
